## QualySense amongst the 2015 Top 10 Swiss Startups

QualySense, a Swiss company focused on innovative grain and seed sorting technology announced today that it has been named for the third consecutive year amongst the Top 10 Swiss Startups. Winner of multiple awards over the last 5 years and an unbeatable leader in its category (robotics for agri-food), QualySense has won its reputation in the European and North American markets.

Dr. Francesco Dell'Endice, CEO of QualySense, said: *"This award is a sign of continuity. The Swiss TOP100 jury could observe the company over the last years and recognized the consistent progress the team made with respect to technology and market development. We are now mature enough to act as a real company and apply our principles of excellence not only in deploying cutting edge technologies but also in delivering an outstanding customer experience worldwide"*.

QualySense use space technologies that combine Machine Vision and Near-Infrared spectroscopy to develop the **QSorter**, the first artificial intelligence robot for high-speed single kernel analysis and sorting of grains. The **QSorter** technology analyzes and sorts each grain individually based on its physical and compositional properties, which enables a reliable and sophisticated control solution aimed at increasing quality and safety of food products, for example in the development of diet-specific food products.

### ABOUT QUALYSENSE

QualySense is a Swiss company pioneering innovative high-speed single kernel sorting solutions to achieve optimal processing, quality, and safety of agricultural products. To learn more, please visit [www.qualysense.com](http://www.qualysense.com).
